*Role of ABCG1 and other ABCG family members in lipid metabolism.*;

J. Lipid Res. 42:1513-1520(2001).

-I- FUNCTION: XENOBIOTIC TRANSPORTER THAT APPEARS TO PLAY A MAJOR ROLE
IN THE MULTIDRUG RESISTANCE PHENOTYPE OF A SPECIFIC MCF-7 BREAST
CANCER CELL LINE. MHEN OVEREXPRESSED, THE TRANSFECTED CELLS BECOME
RESISTANT TO MITOXANTRONE, DAUGNORUBICIN AND DOXORUBICIN, DISPLAY
DIMINISHED INFRACELLULAR ACCUMULATION OF DAUGNORUBICIN, AND
MANIFEST AN ATP-DEPENDENT INCREASE IN THE EFFLUX OF RHODAMINE 123.

-I- SUBCELLULAR LOCATION: Integral membrane protein (Probable).

-I- SIMILARITY: BELONGS TO THE ABC TRANSPORTER FAMILY. ABCG (WHITE)

SUBUNIT: May form heterodimers with several heterologous of the ABCG subfamily.
SUBCELULAR LOCATION: Integral membrane protein. Predomin localized in the intracellular compartments mainly associ the endoplasmic reticulum (ER) and Golgi membranes.

The invention also provides ABCG5 polypeptides and polynucleotides. ABCG5 gene is also known as sitosterolaemia susceptibility gene (SSG). Sequences of the invention are useful for treating or preventing sterol-related disorder: such as sitosterolaemia, hyperlipidaemia, hypercholesterolaemia, gall stones, HDL deficiency, atherosclerosis and nutritional deficiencies. They are also useful in gene therapy. The present sequence is human ABCG8 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New ABCG8 polypeptides and nucleic acids, useful for treating sterol-related disorders e.g. sitosterolemia, hypercholesterolemia, hyperlipidemia, gall stones, HDL deficiency, atherosclerosis, or nutritional deficiencies -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a method (MI) for modulating the activity of ARP-binding cassette (ABC) transporters by influencing the CC dimerisation of the nucleotide binding domains comprises using: (a) a CC polypeptide (polyp) consisting of 5-50 amino acids comprising the D loop Sequence of an ABC transporter (ABP52049 to ABP52091); (b) a polypector of the D loop sequence of an ABC transporter; (c) a peptide CC mimeric or antisense peptide of (a) or (b). ABC transporters have CC antibacterial, fungicide and protozoacide activities. (MI) is useful for CC selectively modulating the activity of ABC transporters belonging to the CC group of multidrug transporter/P-glycoproteins. Bacterial, fungal or CC protozoal ABC transporters are involved in the infection of a mammal or CC in the induction of resistance to antibotics or drugs in a mammal. (MI) is useful for preventing, treating or alleviating diseases associated With functionality of an ABC transporter. ABP52092 to ABP52140 represent invention
                                                                                                                                                                                                                                                                                                                                                   Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to ATP-binding cassette (ABC) family cholesterol transporter, ABCGB polypeptides and polypucleotides. The invention also provides ABCG5 polypeptides and polypucleotides. ABCG5 gene is also known as sitosterolaemia susceptibility gene (SSG). Sequences of the invention are useful for treating or preventing sterol-related disorders such as sitosterolaemia, hyperlipidaemia, hypercholesterolaemia, gall stones, HDL deficiency, atherosclerosis and nutritional deficiencies. They are also useful in gene therapy. The present sequence is mouse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New ABCG8 polypeptides and nucleic acids, useful for treating sterol-related disorders e.g. sitosterolemia, hypercholesterolemia, hyperlipidemia, gall stones, HDL deficiency, atherosclerosis, or nutritional deficiencies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 22;

The invention relates to human transporters and ion channels (TRICH)

Dolypeptides, a naturally occurring amino acid sequence 90 % identical to TRICH, a biologically active fragment of TRICH or an immunogenic fragment of TRICH. Also included are an isolated polynucleotide encoding TRICH, a recombinant polynucleotide comprising a promoter sequence operably considered to the TRICH polynucleotide, a cell transformed with the crecombinant polynucleotide, an isolated antibody that binds specifically to TRICH, and screening for compounds which bind to TRICH, modulate TRICH expression or are ant/agonists of TRICH.

The polypeptides are useful for diagnosing, treating, and correventing transport, neurological, muscule, immunological disorders (e.g. scleroderma, systemic lupus crythematosus, allergies), cell proliferative disorders such as cancers (e.g. leukaemia, cervical or CC breast cancers), neurological such as cancers (e.g. Parkinson's disease, allergies), neurological musculers (e.g. Parkinson's disease, musculers (e.g. Parkinson's disease, musculers (a.g. Parkinson's disease, musculers (a.g. Parkinson's disease, musculers (e.g. Parkinson's disease).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       27-OCT-2000; 2000US-243989P.

They can also be used in assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of transporters and ion channels. TRICH or its fragments may also be used in screening for compounds that specifically bind to and modulate the activity of TRICH. The polynucleotides can be used to create knock in humanised animals or transgenic animals to model human disease. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ş
                                                                       culture or mammal which have ABCCS polypeptide with a compound and measuring ABCGS biological activity in the cell culture or in mammal, where an increase or decrease in ABCGS biological activity on a control cell culture or mammal of ABCGS biological activity in a control cell culture or mammal or decreases ABCGS activity respectively. The cell culture or mammal comprises a mutated ABCGS polypeptide or a wild type polypeptide. The ABCGS biological activity, or level of ABCGS mRNA, or level of the polypeptide in a cell culture or mammal is also compared with that of a second cell culture or mammal comprising a wild type ABCGS polypeptide. Stimulation of ABCGS activity is useful for treating or preventing hypersterolemia, arteriosclerosis, heart disease and/or Alzheimer's
                                                                                                                                                                                                                                                                                       The present invention relates to a new mammalian ATP-binding cassett gene 5 (ABCG5) polypeptide. The invention is useful for identifying predisposition for developing sitosteroclemia, arteriosclerosis or he disease. The molecules of the invention are also useful for identify a compound which alters ABCG5 activity level comprising contacting a
                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel mammalian ATP-binding cassette gene 5 polypeptide, a nucleic acid encoding the polypeptide, useful for treating sitosterolemia, arteriosclerosis and heart diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Rat; ABCG5; ATP-binding cassette gene 5; sitosterolemia; cholesterol; arteriosclerosis; heart disease; hypersterolemia; Alzheimer's disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   where an increase or decrease in ABCG5 Diological activity in a control cell culture or mammal not contacted with the compound, identifies a compound that increases or decreases ABCG5 activity respectively. The cell culture or mammal comprises a mutated ABCG5 polypeptide or a wild type polypeptide. The ABCG5 biological activity, or level of ABCG5 mRNA, or level of the polypeptide in a cell culture or mammal is also compared with that of a second cell culture or mammal comprising a wild type ABCG5 polypeptide. Stimulation of ABCG5 activity is useful for treating or preventing hypersterolemia, arteriosclerosis, heart disease and/or Alzheimer's disease. The method of the invention is useful for increasing cholesterol excretion and/or decreasing cholesterol adsorption. The present amino acid sequence represents the human ABCG5 mutant R389H protein of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to a new mammalian Amp-binding cassette gene 5 (ABCG5) polypeptide. The invention is useful for identifying a predisposition for developing sitosterolemia, arteriosclerosis or heart disease. The molecules of the invention are also useful for identifying a compound which alters ABCG5 activity level comprising contacting a cell culture or mammal which have ABCG5 polypeptide with a compound and measuring ABCG5 biological activity in the cell culture or in mammal, where an increase or decrease in ABCG5 biological activity compared to never historical activity in the cell culture or in mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Note: This sequence is not shown in the specification but is derived from the wild-type human ABCG5 protein (AAU96984) given on pages 35-of the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 7; Page -;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel mammalian ATP-binding cassette gene 5 polypeptide, nucleic acid encoding the polypeptide, useful for treating sitosterolemia, arteriosclerosis and heart diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2002-416483/44

```

The present invention relates to a new mammalian ATP-binding cassette gene 5 (ABCG5) polypeptide. The invention is useful for identifying a predisposition for developing sitosterolemia, arteriosclerosis or heart disease. The molecules of the invention are also useful for identifying a compound which alters ABCG5 activity level comprising contacting a cell culture or mammal which have ABCG5 polypeptide with a compound and measuring ABCG5 biological activity in the cell culture or in mammal,

The method of the invention is useful for increasing cholesterol excretion and/or decreasing cholesterol adsorption. The present amino acid sequence represents the human ABCG5 protein of the invention. This sequence is encoded by the human ABCG5 gene located on chromosome 2p21.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          decreases ABCG5 activity respectively. The cell culture or mammal comprises a mutated ABCG5 polypeptide or a wild type polypeptide. The ABCG5 biological activity, or level of ABCG5 mRNA, or level of the polypeptide in a cell culture or mammal is also compared with that of a second cell culture or mammal swild type ABCG5 polypeptide. Stimulation of ABCG5 activity is useful for treating or preventing hypersterolemia, arteriosclerosis, heart disease and/or Alzheimer's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   where an increase or decrease in ABCG5 biological activity compared to ABCG5 biological activity in a control cell culture or mammal not contacted with the compound, identifies a compound that increases or

disease. The molecules of the invention are also useful for identifying care compound which alters ABCG5 polypeptide with a compound and coulture or mammal which have ABCG5 polypeptide with a compound and control cell culture or mammal not contacted with the compound, identifies a compound that increases or contacted with the compound, identifies a compound that increases or compound and compound and compound that increases or compound and compound and compound that increases or compound with the compound, identifies a compound that increases or compound with the compound and compound that increases or compound with the compound and compound that increases or compound and compound is also compound with that of a second cell culture or mammal is also compared with that of a compound cell culture or mammal is also compared with that of a compound cell culture or mammal is also compared with that of a compound cell culture or mammal is also compared with that of a compound cell culture or mammal is also compared with that of a compound cell culture or mammal is also compared with that of a compound cell culture or mammal is also compared with that of a compound cell culture or mammal is also compared with that of a compound cell culture or mammal is also compared with that of a compound cell culture or mammal is also compared with that of a compound is also compared with that of a compound is also compound with the compound is also compound with the compound in the cell culture or mammal compound is also compound with the compound is also compound in the cell culture or mammal compound is also compound with the compound is also compound in the compound is also compound in the cell culture or mammal is also compound in the cell culture or mammal is also compound in the cel The present invention relates to a new mammalian ATP-binding cassette gene 5 (ABCG5) polypeptide. The invention is useful for identifying a predisposition for developing situsterolemia, arteriosclerosis or heart disease. The molecules of the invention are also useful for identifying Note: This sequence is not shown in the specification but is derived from the wild type human ABCG5 protein (AAU96984) given on pages 35invention specification. for identifying pages 35-36

polynucleotide, useful for screening a compound that increases the level of expression or activity of SSG polypeptide for treating

(SSG) polypeptide. SSG is a member of adenosine triphosphate (ATP)
CC binding cassette (ABC) family cholesterol transporter. SSG is useful
CC for identifying a compound useful in the treatment or prevention of a
CC sterol-related disorder, including sitosterolaemia, hyperlipidaemia,
CC hypercholesterolaemia, gall stones, HDL deficiency, atherosclerosis or
CC nutritional deficiencies. SSG is also useful for treating cholesterolCC associated diseases or conditions including ocronary heart disease and
CC including arthritis, xanthomas and chronic haemolytic anaemia. SSG
CC expression cassette is useful in the production of transgenic non-human
CC animals. SSG genes and their homologues are useful as tools for a number
CC cardiovascular disorders, for forensics and paternity determinations,
CC and for treating any of a large number of SSG associated diseases. The
CC present sequence is human SSG protein. Human SSG is located on chromosome to an isolated Sitosterolaemia Susceptibility Gene is located on chromosome

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cc gene 5 (ABCG5) polypeptide. The invention is useful for identifying a ccl predisposition for developing sitosterolemia, arteriosclerosis or heart cc disease. The molecules of the invention are also useful for identifying a compound which alters ABCG5 activity level comprising contacting a cell cc culture or mammal which have ABCG5 polypeptide with a compound and cc measuring ABCG5 biological activity in the cell culture or in mammal. Cc where an increase or decrease in ABCG5 biological activity compared to contacted with the compound, identifies a compound that increases or cell culture or mammal not comprises a mutated ABCG5 polypeptide or a wild type polypeptide. The Cc ABCG5 biological activity, or level of ABCG5 mRNA, or level of the copypeptide in a cell culture or mammal is also compared with that of a second cell culture or mammal is also compared with that of a second cell culture or mammal is also compared with that of a second cell culture or mammal is also compared with that of a second cell culture or mammal is also compared with that of a second cell culture or mammal is also compared with that of a second cell culture or mammal is also compared with that of a second cell culture or mammal is also compared with that of a second cell culture or mammal is also compared with that of a second cell culture or mammal is also compared with that of a second cell culture or mammal is also compared with that of a second cell culture or mammal is also compared with that of a second cell culture or mammal is also compared with that of a second cell culture or mammal is also compared with that of a second cell culture or mammal is also compared with that of a second cell culture or mammal is also compared with that of a second cell culture or mammal is also compared with that of a second cell culture or mammal is also compared with that of a second cell culture or mammal is also compared with that of a second cell culture or mammal is also compared with that of a second cell culture or mammal is also compare
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches

                                                                                                                                           The present invention relates to a new mammalian ATP-binding cassette gene 5 (ABGG5) polypeptide. The invention is useful for identifying a credisposition for developing sitosterolemia, arteriosclerosis or heart CC disease. The molecules of the invention are also useful for identifying a compound which alters ABGG5 activity level comprising contacting a cell culture or mammal which have ABGG5 polypeptide with a compound and comeasuring ABGG5 biological activity in the cell culture or in mammal, where an increase or decrease in ABGG5 biological activity compared to contacted with the compound, identifies a compound that increases or contacted with the compound, identifies a compound that increases or contacted with the compound, identifies a compound that increases or contacted with the compound, identifies a compound that increases or contacted with the compound, identifies a compound that increases or comparises a mutated ABGG5 polypeptide or a wild type polypeptide. The CC polypeptide in a cell culture or mammal is also compared with that of a second cell culture or mammal is also compared with that of a second cell culture or mammal is also compared with that of a second cell culture or mammal is useful for treating or preventing configuration and/or ABGG5 activity is useful for increasing cholesterol acid sequence represents the human ABGG5 mutant E146Q protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ф
